

CLIENT SUCCESS STORY

Operational Excellence & Platform Visibility Transformation

Leading ASX-Listed Property Group

See how SpaceTech transforms support operations into measurable business outcomes through platform ownership, operational visibility, and continuous improvement.

Hero Metrics

[Display as a 4-card metrics row]

- 2,000+ – Platform Issues Managed
- 95%+ – SLA on owned ticket volume
- 18 – Recurring issue patterns identified and resolved
- <100 – Open backlog maintained, down from sustained volume

Challenge

Limited Visibility. Limited Accountability. Reactive Support.

The client operated a complex Yardi ecosystem supporting commercial and residential property portfolios across hundreds of business users. Support requests were being addressed, but leadership lacked visibility into platform demand, recurring issues, ownership accountability, operational trends, and service performance.

Key challenges:

- Limited operational reporting and insights
- Inconsistent ticket categorisation
- Lack of module ownership accountability
- Difficulty identifying recurring issues and root causes
- Reactive support model with limited governance visibility
- Resource attrition

What SpaceTech Built

[Display as 4 icon cards]

- SME Ownership — Named module experts with accountability
- Categorisation — Structured Jira operational taxonomy
- Dashboards — Real-time operational visibility
- Governance — Continuous improvement reviews

Approach: Building a Data-Driven Yardi Support Operating Model

Module Ownership Model

SpaceTech established named primary and backup SMEs across critical Yardi functions, including Voyager Property Management & Lease Administration, Commercial Cafe, Voyager GL/Finance, Accounts Receivable/Bank Book, Deal Manager, Capex/Construction Manager, Procure to Pay, Facility Manager, Investment Manager, Fixed Assets, Reporting, Security, and Integrations. This created clear ownership and accountability across every Yardi module aligned with client business processes.

Operational Categorisation Framework

SpaceTech designed a structured Jira taxonomy spanning components, operational categories, sub-categories, root cause classification, and reporting standards. For the first time, leadership could understand what issues were occurring, which modules generated demand, which themes were recurring, and where improvement efforts should focus.

Executive Dashboards & Reporting

SpaceTech developed real-time dashboards covering ticket intake and closures, stale ticket tracking, waiting-for-customer analysis, SLA compliance, and operational category reporting.

Real-time operational dashboards transformed support from reactive ticket handling into measurable platform management.

Illustrative example — values shown for layout purposes

Activity dashboard (last 7 days)

Status	User A	User B	User C	Total
■ In progress	2	1	0	3
■ Resolved	9	8	7	24
■ Waiting (support)	4	3	2	9
■ Waiting (customer)	5	4	3	12
■ Cancelled	1	1	0	2
Total unique issues	21	17	12	50

Stale tickets (last 7 days)

User A	18 (78%)
User B	3 (13%)
User C	2 (9%)
Total stale: 23	

Tickets created vs resolved

Tickets waiting on customer (14+ days)

Key	Assignee	Days
TKT-1001	User A	19
TKT-1002	User B	16
TKT-1003	User A	19
TKT-1004	User C	16
TKT-1005	User A	19

Tickets stuck in pending (14+ days)

Key	Assignee	Last viewed
TKT-2001	User A	18d ago
TKT-2002	User C	22d ago
TKT-2003	User D	22d ago
TKT-2004	User C	21d ago
TKT-2005	User B	3d ago

Real client data

Both average and median resolution time fell steadily over nine months, average dropping from ~33.5 to ~6.4 days, median from ~23.7 to ~4.3 days, reflecting sustained process and capacity improvements rather than a single one-off fix.

Continuous Improvement Governance

SpaceTech implemented recurring operational reviews focused on backlog reduction, root cause elimination, process optimization, knowledge management, and user enablement.

Business Outcomes

[Display as icon cards]

- Established enterprise-wide support categorisation and reporting standards
 - Created real-time operational dashboards for leadership visibility
 - Implemented named SME ownership across critical business functions
 - Managed more than 2,000 platform requests
 - 95%+ SLA on owned ticket volume
 - 18 Recurring issue patterns identified and eliminated through root-cause fixes
 - Closures exceeded new ticket intake
 - Improved platform health and support transparency
 - Built a scalable operating model supporting hundreds of business users
-

BUSINESS IMPACT — Navy blue banner

FROM TICKET MANAGEMENT TO PLATFORM OWNERSHIP

SpaceTech helped transform Yardi support operations from a reactive service model into a structured, measurable, and continuously improving operating model supporting hundreds of business users across a complex enterprise property environment. Beyond resolving tickets faster, SpaceTech's root cause program targets the *source* of recurring issues - turning repeat problems into permanent fixes, so business teams spend less time raising the same ticket twice.

Recurring issue patterns identified, by module

Duplicate billing from overlapping amendments

Root cause traced to amendment sequencing; resolved with exception reporting plus a permanent product fix

Recurring vendor and GL mismatches in payables integration

Interim data fixes applied while a permanent upstream integration fix was scoped and tracked

Invoice register gets stuck in workflow — restart required to progress

Diagnosed as a workflow configuration issue; resolved by a workflow design change so invoices can no longer be updated once pushed for manager approval

Visual Layout Guide

Top band: Six icon cards — Visibility, Ownership, Governance, Performance, Platform Health, Continuous Improvement.

Navigation strip: Challenge | Approach | Outcomes.

Metrics strip: 2,000+ Issues Managed / 95%+ SLA / 18 Recurring issue patterns

Dashboard section, left side: Activity Dashboard, Created vs Resolved, Stale Tickets, SLA Tracking screenshots.

Dashboard section, right side: Key achievements list — metrics plus Named SME Model, Operational Categorisation Framework, Real-Time Executive Dashboards, Continuous Improvement Governance.

Website Section Placement

Place immediately after “Why SpaceTech” and before “Industry Focus.” This section serves as proof that SpaceTech delivers measurable business outcomes.

Designer Notes

- Use six icon cards across the top band.
- Include a navy blue proof banner for the Business Impact statement.
- Show metric cards prominently; the same four metrics recur in three places (Hero, Metrics Strip, Visual Layout) by design, to reinforce the headline numbers.
- Consider a blurred or stylized screenshot of operational dashboards as a background visual to reinforce governance, visibility, and enterprise operations.
